

List of Figures

Figure 1-1	Rehabilitation Process Flowchart	1-9
Figure 2-1	General Response Spectrum	2-23
Figure 2-2	In-Plane Discontinuity in Lateral System	2-30
Figure 2-3	Typical Building with Out-of-Plane Offset Irregularity	2-30
Figure 2-4	General Component Behavior Curves	2-32
Figure 2-5	Idealized Component Load versus Deformation Curves for Depicting Component Modeling and Acceptability	2-33
Figure 2-6	Backbone Curve for Experimental Data	2-45
Figure 2-7	Alternative Force Deformation Curve	2-46
Figure 3-1	Calculation of Effective Stiffness, K_e	3-12
Figure 4-1	(a) Idealized Elasto-Plastic Load-Deformation Behavior for Soils (b) Uncoupled Spring Model for Rigid Footings	4-8
Figure 4-2	Elastic Solutions for Rigid Footing Spring Constants (based on Gazetas, 1991 and Lam et al., 1991)	4-11
Figure 4-3	(a) Foundation Shape Correction Factors (b) Embedment Correction Factors	4-12
Figure 4-4	Lateral Foundation-to-Soil Stiffness for Passive Pressure (after Wilson, 1988)	4-13
Figure 4-5	Vertical Stiffness Modeling for Shallow Bearing Footings	4-14
Figure 4-6	Idealized Concentration of Stress at Edge of Rigid Footings Subjected to Overturning Moment	4-15
Figure 5-1	Definition of the a , b , c , d , and e Parameters in Tables 5-4, 5-6, and 5-8, and the Generalized Load-Deformation Behavior	5-10
Figure 5-2	Definition of Chord Rotation	5-11
Figure 5-3	Full-Pen Connection in FR Connection with Variable Behavior	5-15
Figure 5-4	Clip Angle Connection	5-22
Figure 5-5	T-Stub Connection may be FR or PR Connection	5-23
Figure 5-6	Flange Plate Connection may be FR or PR Connection	5-24
Figure 5-7	End Plate Connection may be FR or PR Connection	5-24
Figure 5-8	Two Configurations of PR Composite Connections	5-24
Figure 6-1	Generalized Load-Deformation Relation	6-12
Figure 6-2	Plastic Hinge Rotation in Shear Wall where Flexure Dominates Inelastic Response	6-42
Figure 6-3	Story Drift in Shear Wall where Shear Dominates Inelastic Response	6-42
Figure 6-4	Chord Rotation for Shear Wall Coupling Beams	6-42
Figure 7-1	Idealized Force-Deflection Relation for Walls, Pier Components, and Infill Panels	7-10
Figure 8-1	Normalized Force versus Deformation Ratio for Wood Elements	8-15
Figure 9-1	Calculation of Secant Stiffness, K_s	9-20
Figure 10-1	Comparison of FEMA 178 (BSSC, 1992a) and <i>Guidelines</i> Acceptance Criteria	10-17
