

Table of Contents

Foreword	vii
Preface	ix
1. Introduction	1-1
1.1 Purpose	1-1
1.2 Significant New Features	1-1
1.2.1 Seismic Performance Levels and Rehabilitation Objectives	1-1
1.2.2 Simplified and Systematic Rehabilitation Methods	1-3
1.2.3 Varying Methods of Analysis	1-3
1.2.4 Quantitative Specifications of Component Behavior	1-3
1.2.5 Procedures for Incorporating New Information and Technologies into Rehabilitation	1-4
1.3 Scope, Contents, and Limitations	1-4
1.3.1 Buildings and Loadings	1-4
1.3.2 Activities and Policies Associated with Seismic Rehabilitation	1-4
1.3.3 Seismic Mapping	1-5
1.3.4 Technical Content	1-6
1.4 Relationship to Other Documents and Procedures	1-6
1.5 Use of the <i>Guidelines</i> in the Seismic Rehabilitation Process	1-7
1.5.1 Initial Considerations for Individual Buildings	1-8
1.5.2 Initial Risk Mitigation Strategies	1-10
1.5.3 Simplified Rehabilitation	1-10
1.5.4 Systematic Rehabilitation	1-11
1.5.5 Verification and Economic Acceptance	1-11
1.5.6 Implementation of the Design	1-11
1.6 Use of the <i>Guidelines</i> for Local or Directed Risk Mitigation Programs	1-12
1.6.1 Initial Considerations for Mitigation Programs	1-12
1.6.2 Use in Passive Programs	1-15
1.6.3 Use in Active or Mandated Programs	1-15
1.7 References	1-16
2. General Requirements (Simplified and Systematic Rehabilitation)	2-1
2.1 Scope	2-1
2.2 Basic Approach	2-1
2.3 Design Basis	2-2
2.4 Rehabilitation Objectives	2-4
2.4.1 Basic Safety Objective	2-5
2.4.2 Enhanced Rehabilitation Objectives	2-6
2.4.3 Limited Rehabilitation Objectives	2-6
2.5 Performance Levels	2-7
2.5.1 Structural Performance Levels and Ranges	2-7
2.5.2 Nonstructural Performance Levels	2-8
2.5.3 Building Performance Levels	2-10

2.6	Seismic Hazard	2-18
2.6.1	General Ground Shaking Hazard Procedure	2-19
2.6.2	Site-Specific Ground Shaking Hazard	2-23
2.6.3	Seismicity Zones	2-24
2.6.4	Other Seismic Hazards	2-24
2.7	As-Built Information	2-25
2.7.1	Building Configuration	2-25
2.7.2	Component Properties	2-25
2.7.3	Site Characterization and Geotechnical Information	2-27
2.7.4	Adjacent Buildings	2-27
2.8	Rehabilitation Methods	2-28
2.8.1	Simplified Method	2-28
2.8.2	Systematic Method	2-28
2.9	Analysis Procedures	2-28
2.9.1	Linear Procedures	2-29
2.9.2	Nonlinear Procedures	2-31
2.9.3	Alternative Rational Analysis	2-31
2.9.4	Acceptance Criteria	2-32
2.10	Rehabilitation Strategies	2-35
2.10.1	Local Modification of Components	2-35
2.10.2	Removal or Lessening of Existing Irregularities and Discontinuities	2-35
2.10.3	Global Structural Stiffening	2-35
2.10.4	Global Structural Strengthening	2-36
2.10.5	Mass Reduction	2-36
2.10.6	Seismic Isolation	2-36
2.10.7	Supplemental Energy Dissipation	2-36
2.11	General Analysis and Design Requirements	2-36
2.11.1	Directional Effects	2-37
2.11.2	P- Δ Effects	2-37
2.11.3	Torsion	2-37
2.11.4	Overturning	2-37
2.11.5	Continuity	2-39
2.11.6	Diaphragms	2-39
2.11.7	Walls	2-40
2.11.8	Nonstructural Components	2-40
2.11.9	Structures Sharing Common Elements	2-40
2.11.10	Building Separation	2-40
2.11.11	Vertical Earthquake Effects	2-41
2.12	Quality Assurance	2-41
2.12.1	Construction Quality Assurance Plan	2-41
2.12.2	Construction Quality Assurance Requirements	2-42
2.12.3	Regulatory Agency Responsibilities	2-42
2.13	Alternative Materials and Methods of Construction	2-43
2.13.1	Experimental Setup	2-43
2.13.2	Data Reduction and Reporting	2-44
2.13.3	Design Parameters and Acceptance Criteria	2-44
2.14	Definitions	2-46

2.15	Symbols	2-48
2.16	References	2-50
3.	Modeling and Analysis (Systematic Rehabilitation)	3-1
3.1	Scope	3-1
3.2	General Requirements	3-1
3.2.1	Analysis Procedure Selection	3-1
3.2.2	Mathematical Modeling	3-2
3.2.3	Configuration	3-3
3.2.4	Floor Diaphragms	3-4
3.2.5	P- Δ Effects	3-4
3.2.6	Soil-Structure Interaction	3-4
3.2.7	Multidirectional Excitation Effects	3-5
3.2.8	Component Gravity Loads and Load Combinations	3-5
3.2.9	Verification of Design Assumptions	3-6
3.3	Analysis Procedures	3-6
3.3.1	Linear Static Procedure (LSP)	3-6
3.3.2	Linear Dynamic Procedure (LDP)	3-9
3.3.3	Nonlinear Static Procedure (NSP)	3-10
3.3.4	Nonlinear Dynamic Procedure (NDP)	3-14
3.4	Acceptance Criteria	3-15
3.4.1	General Requirements	3-15
3.4.2	Linear Procedures	3-15
3.4.3	Nonlinear Procedures	3-16
3.5	Definitions	3-16
3.6	Symbols	3-17
3.7	References	3-18
4.	Foundations and Geotechnical Hazards (Systematic Rehabilitation)	4-1
4.1	Scope	4-1
4.2	Site Characterization	4-1
4.2.1	Foundation Soil Information	4-1
4.2.2	Seismic Site Hazards	4-2
4.3	Mitigation of Seismic Site Hazards	4-5
4.3.1	Fault Rupture	4-5
4.3.2	Liquefaction	4-5
4.3.3	Differential Compaction	4-6
4.3.4	Landslide	4-6
4.3.5	Flooding or Inundation	4-6
4.4	Foundation Strength and Stiffness	4-6
4.4.1	Ultimate Bearing Capacities and Load Capacities	4-7
4.4.2	Load-Deformation Characteristics for Foundations	4-8
4.4.3	Foundation Acceptability Criteria	4-16
4.5	Retaining Walls	4-17
4.6	Soil Foundation Rehabilitation	4-18
4.6.1	Soil Material Improvements	4-18
4.6.2	Spread Footings and Mats	4-18

4.6.3	Piers and Piles	4-18
4.7	Definitions	4-19
4.8	Symbols	4-19
4.9	References	4-21
5.	Steel and Cast Iron (Systematic Rehabilitation)	5-1
5.1	Scope	5-1
5.2	Historical Perspective	5-1
5.3	Material Properties and Condition Assessment	5-1
5.3.1	General	5-1
5.3.2	Properties of In-Place Materials and Components	5-2
5.3.3	Condition Assessment	5-4
5.3.4	Knowledge (κ) Factor	5-8
5.4	Steel Moment Frames	5-9
5.4.1	General	5-9
5.4.2	Fully Restrained Moment Frames	5-9
5.4.3	Partially Restrained Moment Frames	5-18
5.5	Steel Braced Frames	5-25
5.5.1	General	5-25
5.5.2	Concentric Braced Frames (CBF)	5-25
5.5.3	Eccentric Braced Frames (EBF)	5-29
5.6	Steel Plate Walls	5-31
5.6.1	General	5-31
5.6.2	Stiffness for Analysis	5-31
5.6.3	Strength and Deformation Acceptance Criteria	5-32
5.6.4	Rehabilitation Measures	5-32
5.7	Steel Frames with Infills	5-32
5.8	Diaphragms	5-32
5.8.1	Bare Metal Deck Diaphragms	5-32
5.8.2	Metal Deck Diaphragms with Structural Concrete Topping	5-34
5.8.3	Metal Deck Diaphragms with Nonstructural Concrete Topping	5-35
5.8.4	Horizontal Steel Bracing (Steel Truss Diaphragms)	5-36
5.8.5	Archaic Diaphragms	5-37
5.8.6	Chord and Collector Elements	5-38
5.9	Steel Pile Foundations	5-39
5.9.1	General	5-39
5.9.2	Stiffness for Analysis	5-39
5.9.3	Strength and Deformation Acceptance Criteria	5-39
5.9.4	Rehabilitation Measures for Steel Pile Foundations	5-39
5.10	Definitions	5-39
5.11	Symbols	5-41
5.12	References	5-43
6.	Concrete (Systematic Rehabilitation)	6-1
6.1	Scope	6-1
6.2	Historical Perspective	6-1
6.3	Material Properties and Condition Assessment	6-2

6.3.1	General	6-2
6.3.2	Properties of In-Place Materials and Components	6-2
6.3.3	Condition Assessment	6-8
6.3.4	Knowledge (κ) Factor	6-10
6.3.5	Rehabilitation Issues	6-10
6.3.6	Connections	6-11
6.4	General Assumptions and Requirements	6-11
6.4.1	Modeling and Design	6-11
6.4.2	Design Strengths and Deformabilities	6-13
6.4.3	Flexure and Axial Loads	6-14
6.4.4	Shear and Torsion	6-14
6.4.5	Development and Splices of Reinforcement	6-15
6.4.6	Connections to Existing Concrete	6-16
6.5	Concrete Moment Frames	6-16
6.5.1	Types of Concrete Moment Frames	6-16
6.5.2	Reinforced Concrete Beam-Column Moment Frames	6-17
6.5.3	Post-Tensioned Concrete Beam-Column Moment Frames	6-26
6.5.4	Slab-Column Moment Frames	6-27
6.6	Precast Concrete Frames	6-31
6.6.1	Types of Precast Concrete Frames	6-31
6.6.2	Precast Concrete Frames that Emulate Cast-in-Place Moment Frames	6-32
6.6.3	Precast Concrete Beam-Column Moment Frames other than Emulated Cast-in-Place Moment Frames	6-32
6.6.4	Precast Concrete Frames Not Expected to Resist Lateral Loads Directly	6-33
6.7	Concrete Frames with Infills	6-33
6.7.1	Types of Concrete Frames with Infills	6-33
6.7.2	Concrete Frames with Masonry Infills	6-34
6.7.3	Concrete Frames with Concrete Infills	6-37
6.8	Concrete Shear Walls	6-39
6.8.1	Types of Concrete Shear Walls and Associated Components	6-39
6.8.2	Reinforced Concrete Shear Walls, Wall Segments, Coupling Beams, and RC Columns Supporting Discontinuous Shear Walls	6-40
6.9	Precast Concrete Shear Walls	6-48
6.9.1	Types of Precast Shear Walls	6-48
6.9.2	Precast Concrete Shear Walls and Wall Segments	6-49
6.10	Concrete Braced Frames	6-51
6.10.1	Types of Concrete Braced Frames	6-51
6.10.2	General Considerations in Analysis and Modeling	6-51
6.10.3	Stiffness for Analysis	6-52
6.10.4	Design Strengths	6-52
6.10.5	Acceptance Criteria	6-52
6.10.6	Rehabilitation Measures	6-53
6.11	Concrete Diaphragms	6-53
6.11.1	Components of Concrete Diaphragms	6-53
6.11.2	Analysis, Modeling, and Acceptance Criteria	6-53
6.11.3	Rehabilitation Measures	6-54
6.12	Precast Concrete Diaphragms	6-54

6.12.1	Components of Precast Concrete Diaphragms	6-54
6.12.2	Analysis, Modeling, and Acceptance Criteria	6-54
6.12.3	Rehabilitation Measures	6-55
6.13	Concrete Foundation Elements	6-55
6.13.1	Types of Concrete Foundations	6-55
6.13.2	Analysis of Existing Foundations	6-55
6.13.3	Evaluation of Existing Condition	6-56
6.13.4	Rehabilitation Measures	6-56
6.14	Definitions	6-57
6.15	Symbols	6-57
6.16	References	6-59
7.	Masonry (Systematic Rehabilitation)	7-1
7.1	Scope	7-1
7.2	Historical Perspective	7-1
7.3	Material Properties and Condition Assessment	7-2
7.3.1	General	7-2
7.3.2	Properties of In-Place Materials	7-2
7.3.3	Condition Assessment	7-4
7.3.4	Knowledge (κ) Factor	7-5
7.4	Engineering Properties of Masonry Walls	7-5
7.4.1	Types of Masonry Walls	7-6
7.4.2	URM In-Plane Walls and Piers	7-8
7.4.3	URM Out-of-Plane Walls	7-10
7.4.4	Reinforced Masonry In-Plane Walls and Piers	7-11
7.4.5	RM Out-of-Plane Walls	7-14
7.5	Engineering Properties of Masonry Infills	7-14
7.5.1	Types of Masonry Infills	7-17
7.5.2	In-Plane Masonry Infills	7-18
7.5.3	Out-of-Plane Masonry Infills	7-21
7.6	Anchorage to Masonry Walls	7-22
7.6.1	Types of Anchors	7-22
7.6.2	Analysis of Anchors	7-22
7.7	Masonry Foundation Elements	7-22
7.7.1	Types of Masonry Foundations	7-22
7.7.2	Analysis of Existing Foundations	7-22
7.7.3	Rehabilitation Measures	7-23
7.8	Definitions	7-23
7.9	Symbols	7-24
7.10	References	7-26
8.	Wood and Light Metal Framing (Systematic Rehabilitation)	8-1
8.1	Scope	8-1
8.2	Historical Perspective	8-1
8.2.1	General	8-1
8.2.2	Building Age	8-1
8.2.3	Evolution of Framing Methods	8-1

8.3	Material Properties and Condition Assessment	8-2
8.3.1	General	8-2
8.3.2	Properties of In-Place Materials and Components	8-3
8.3.3	Condition Assessment	8-6
8.3.4	Knowledge (κ) Factor	8-8
8.3.5	Rehabilitation Issues	8-8
8.4	Wood and Light Frame Shear Walls	8-8
8.4.1	Types of Light Frame Shear Walls	8-9
8.4.2	Light Gage Metal Frame Shear Walls	8-12
8.4.3	Knee-Braced and Miscellaneous Timber Frames	8-12
8.4.4	Single Layer Horizontal Lumber Sheathing or Siding Shear Walls	8-12
8.4.5	Diagonal Lumber Sheathing Shear Walls	8-15
8.4.6	Vertical Wood Siding Shear Walls	8-18
8.4.7	Wood Siding over Horizontal Sheathing Shear Walls	8-18
8.4.8	Wood Siding over Diagonal Sheathing Shear Walls	8-18
8.4.9	Structural Panel or Plywood Panel Sheathing Shear Walls	8-19
8.4.10	Stucco on Studs, Sheathing, or Fiberboard Shear Walls	8-19
8.4.11	Gypsum Plaster on Wood Lath Shear Walls	8-20
8.4.12	Gypsum Plaster on Gypsum Lath Shear Walls	8-20
8.4.13	Gypsum Wallboard Shear Walls	8-21
8.4.14	Gypsum Sheathing Shear Walls	8-21
8.4.15	Plaster on Metal Lath Shear Walls	8-21
8.4.16	Horizontal Lumber Sheathing with Cut-In Braces or Diagonal Blocking Shear Walls	8-21
8.4.17	Fiberboard or Particleboard Sheathing Shear Walls	8-22
8.4.18	Light Gage Metal Frame Shear Walls	8-22
8.5	Wood Diaphragms	8-22
8.5.1	Types of Wood Diaphragms	8-22
8.5.2	Single Straight Sheathed Diaphragms	8-24
8.5.3	Double Straight Sheathed Wood Diaphragms	8-25
8.5.4	Single Diagonally Sheathed Wood Diaphragms	8-26
8.5.5	Diagonal Sheathing with Straight Sheathing or Flooring Above Wood Diaphragms	8-26
8.5.6	Double Diagonally Sheathed Wood Diaphragms	8-26
8.5.7	Wood Structural Panel Sheathed Diaphragms	8-27
8.5.8	Wood Structural Panel Overlays on Straight or Diagonally Sheathed Diaphragms	8-28
8.5.9	Wood Structural Panel Overlays on Existing Wood Structural Panel Diaphragms	8-28
8.5.10	Braced Horizontal Diaphragms	8-29
8.5.11	Effects of Chords and Openings in Wood Diaphragms	8-29
8.6	Wood Foundations	8-29
8.6.1	Wood Piling	8-29
8.6.2	Wood Footings	8-30
8.6.3	Pole Structures	8-30
8.7	Definitions	8-30
8.8	Symbols	8-33

8.9	References	8-34
9.	Seismic Isolation and Energy Dissipation (Systematic Rehabilitation)	9-1
9.1	Introduction	9-1
9.2	Seismic Isolation Systems	9-2
9.2.1	Background	9-2
9.2.2	Mechanical Properties and Modeling of Seismic Isolation Systems	9-2
9.2.3	General Criteria for Seismic Isolation Design	9-4
9.2.4	Linear Procedures	9-6
9.2.5	Nonlinear Procedures	9-7
9.2.6	Nonstructural Components	9-8
9.2.7	Detailed System Requirements	9-9
9.2.8	Design and Construction Review	9-10
9.2.9	Isolation System Testing and Design Properties	9-11
9.3	Passive Energy Dissipation Systems	9-14
9.3.1	General Requirements	9-14
9.3.2	Implementation of Energy Dissipation Devices	9-15
9.3.3	Modeling of Energy Dissipation Devices	9-15
9.3.4	Linear Procedures	9-17
9.3.5	Nonlinear Procedures	9-19
9.3.6	Detailed Systems Requirements	9-21
9.3.7	Design and Construction Review	9-21
9.3.8	Required Tests of Energy Dissipation Devices	9-22
9.4	Other Response Control Systems	9-24
9.5	Definitions	9-25
9.6	Symbols	9-26
9.7	References	9-28
10.	Simplified Rehabilitation	10-1
10.1	Scope	10-1
10.2	Procedural Steps	10-2
10.3	Suggested Corrective Measures for Deficiencies	10-3
10.3.1	Building Systems	10-3
10.3.2	Moment Frames	10-4
10.3.3	Shear Walls	10-5
10.3.4	Steel Braced Frames	10-7
10.3.5	Diaphragms	10-8
10.3.6	Connections	10-9
10.3.7	Foundations and Geologic Hazards	10-10
10.3.8	Evaluation of Materials and Conditions	10-10
10.4	Amendments to FEMA 178	10-12
10.4.1	New Potential Deficiencies Related to Building Systems	10-12
10.4.2	New Potential Deficiencies Related to Moment Frames	10-13
10.4.3	New Potential Deficiencies Related to Shear Walls	10-13
10.4.4	New Potential Deficiencies Related to Connections	10-14
10.5	FEMA 178 Deficiency Statements	10-14
10.6	Definitions	10-14

10.7	Symbols	10-16
10.8	References	10-16
11.	Architectural, Mechanical, and Electrical Components (Simplified and Systematic Rehabilitation)	11-1
11.1	Scope	11-1
11.2	Procedural Steps	11-1
11.3	Historical and Component Evaluation Considerations	11-5
	11.3.1 Historical Perspective	11-5
	11.3.2 Component Evaluation	11-5
11.4	Rehabilitation Objectives, Performance Levels, and Performance Ranges	11-5
	11.4.1 Performance Levels for Nonstructural Components	11-5
	11.4.2 Performance Ranges for Nonstructural Components	11-6
	11.4.3 Regional Seismicity and Nonstructural Components	11-6
	11.4.4 Means of Egress: Escape and Rescue	11-6
11.5	Structural-Nonstructural Interaction	11-7
	11.5.1 Response Modification	11-7
	11.5.2 Base Isolation	11-7
11.6	Acceptance Criteria for Acceleration-Sensitive and Deformation-Sensitive Components	11-7
	11.6.1 Acceleration-Sensitive Components	11-7
	11.6.2 Deformation-Sensitive Components	11-8
	11.6.3 Acceleration- and Deformation-Sensitive Components	11-8
11.7	Analytical and Prescriptive Procedures	11-9
	11.7.1 Application of Analytical and Prescriptive Procedures	11-9
	11.7.2 Prescriptive Procedure	11-9
	11.7.3 Analytical Procedure: Default Equation	11-9
	11.7.4 Analytical Procedure: General Equation	11-9
