

Task 2.3.2: Vulnerabilità delle tipologie in muratura. Un approccio per la valutazione su larga scala della vulnerabilità sismica degli edifici in muratura non rinforzata in aggregato

UR UNICAS: M. Imbimbo¹, E. Grande¹, V. Tomei¹, V. Cima², M. Serpe¹

¹ Dipartimento di Ingegneria Civile e Meccanica, Università degli Studi di Cassino e del Lazio meridionale, Cassino, Italia;

² Dipartimento di Scienze Ingegneristiche, Università G. Marconi, Roma, Italia.

1 INTRODUZIONE

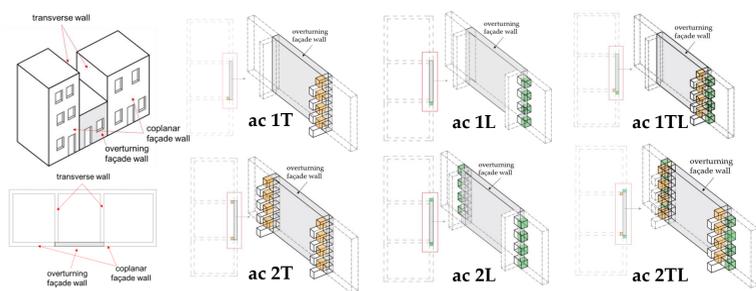

“EFFETTO AGGREGATO”

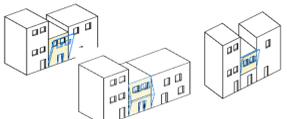

2 OBIETTIVI

Curve di fragilità per meccanismi di ribaltamento fuori piano di pareti di facciata degli edifici in configurazione aggregata.

3 APPROCCIO PROPOSTO

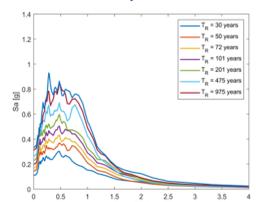

STEP 1.a: meccanismi fuori piano più probabili

STEP 1.b: categorie di edifici

Categorie di edifici	Meccanismo fuori piano più probabile	Numero di piani
1	1	1
2	2	2

STEP 4: input sismico

STEP 2: popolazioni virtuali di edifici

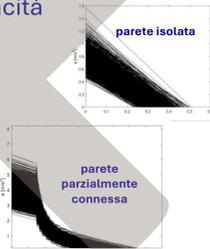

3000 edifici con Metodo Monte Carlo

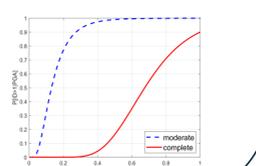

STEP 5: indici di danno ID

STATO DI DANNOSI	
1	Moderato
2	Completo

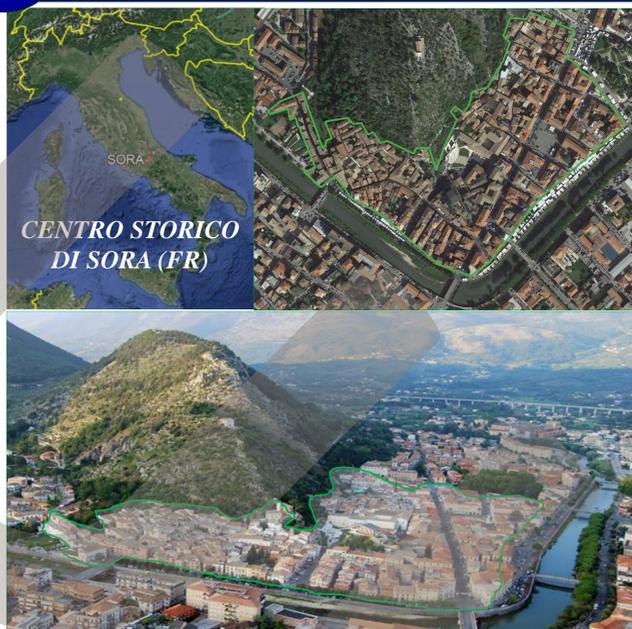

STEP 3: curve di capacità

STEP 6: curve di fragilità delle categorie di edifici

4 APPLICAZIONI
